

HOMEWORK 7, DUE FRIDAY, APRIL 21

Please turn in solutions for the following problems:

- (1) Each of the following functions has a singular point at $z = 0$. Decide if the singular point is isolated or not, and if it is isolated, determine if it is removable, essential, or a pole.

(a) $f(z) = \frac{3z^2 - 4}{z^3}$

(b) $f(z) = ze^{1/z}$

(c) $f(z) = \text{Log}\left(\frac{1}{z}\right)$

(d) $f(z) = \frac{\sin(z)}{z}$

(e) $f(z) = \frac{\cos(z)}{z}$

- (2) Find the residue at $z = 0$ of each of the following functions:

(a) $f(z) = e^{1/z^2}$

(b) $f(z) = \frac{\sin(z)}{z^3}$

(c) $f(z) = \frac{\cot(z)}{z^4}$

- (3) Let C be the positively oriented circle $|z| = 3$. Compute each integral.

(a) $\int_C \frac{1}{z + z^3} dz$

(b) $\int_C \frac{e^z - 1}{z^2} dz$

- (4) Let $f(z) = \frac{2z^2 + 1}{(z + 1)(z^2 + 4)}$. Compute each integral:

(a) $\int_C f(z) dz$, where C is the positively oriented circle $|z - i| = 2$

(b) $\int_C f(z) dz$, where C is the positively oriented circle $|z| = 3$

In addition, I suggest that you work these problems from the Brown/Churchill textbook (but do not turn in):
