Cheat Sheet - Obscuring the Tonic

Debussy used many different scales and compositional techniques to either hide the tonic or to add color to his music.

Planing - a stream of chords (usually in the same inversion) that doesn't really work in terms of harmonic progression.

Whole Tone Scale - every interval is a Major 2nd. There are only 2 unique versions of this scale.

Note that the lack of anything but M2s makes it feel like there really isn't a tonic.

Octatonic Scale - made up of alternating Major and Minor 2nds. This scale is symmetrical, and there are only 3 unique versions. Again, there is no natural tonic here...
