EE 327 Signals and Systems 1 Homework 6

1. Perform block diagram reduction on the following block diagrams. Reduce them to a single block.

a.

2. Given the system defined by the following transfer function, find the output to the given inputs.

$$H(s) = \frac{s+1}{(s+2)(s+3)}$$

- The input is a unit step function, x(t) = u(t)
- b. The input is a unit ramp function, x(t) = tu(t)

3. Find the poles of the following transfer functions, and then determine if the system is stable, marginally stable, or unstable.

a.
$$H(s) = \frac{s+1}{s^2 + s - 6}$$

b.
$$H(s) = \frac{2(s-5)}{s^3 + 3s^2 + 3s + 1}$$

c.
$$H(s) = \frac{s+2}{s(s+2)(s+3)}$$

b.
$$H(s) = \frac{s^2 + s - 6}{2(s - 5)}$$

c. $H(s) = \frac{s + 2}{s(s + 2)(s + 3)}$
d. $H(s) = \frac{s + 1}{(s + 5)((s - 2)^2 + 9)}$
e. $H(s) = \frac{s + 1}{(s + 5)((s + 2)^2 - 9)}$

e.
$$H(s) = \frac{s+1}{(s+5)((s+2)^2-9)}$$

4. Determine if the following systems are stable.

a.
$$H(s) = \frac{1}{s^4 + 2s^3 + s^2 + 10s + 4}$$

b. $H(s) = \frac{2(s-5)}{s^3 + 4s^2 + 9s + 10}$
c. $H(s) = \frac{s+10}{s^4 + 3s^3 + 6s^2 + 12s + 8}$

b.
$$H(s) = \frac{2(s-5)}{s^3 + 4s^2 + 9s + 10}$$

c.
$$H(s) = \frac{s+10}{s^4+3s^3+6s^2+12s+8}$$

5. Determine the values of K for which the systems remain stable.

a.
$$H(s) = \frac{2(s+10)}{s^3 + 3s^2 + 4s + K}$$

a.
$$H(s) = \frac{2(s+10)}{s^3 + 3s^2 + 4s + K}$$

b. $H(s) = \frac{K(s+10)}{s^2 + (K+2)s + 2 - K}$
