

Combinatorial Optimization

K. Subramani, LCSEE, West Virginia University

February 22, 2013

1. Brief review of BF.
2. Path relaxation property.
3. No negative edges. Dijkstra's algorithm.
4. Correctness and multiple analyses.
5. No cycles. Topological sort.
6. Matrix-multiplication algorithm.
7. Johnson's algorithm.
8. Difference constraints.
