

Computational Complexity

K. Subramani, LCSEE, West Virginia University

February 16, 2015

1 Greedy

1. The tape merging problem.
2. The MST problem.
3. The fractional knapsack problem.
4. Scheduling with profit and deadlines.
5. The process scheduling problem.
6. The minimum weight independent set problem in matroids.

2 Dynamic Programming

1. The Rod cutting problem.
2. Matrix Chain multiplication.
