

Computational Complexity

K. Subramani, LCSEE, West Virginia University

February 23, 2015

1 Dynamic Programming

1. Matrix Chain multiplication.
2. Longest common subsequence.
3. The Typesetting problem.
4. The generic graph exploration algorithm.
5. Depth-first search and Breadth-first search.
6. Middle-first search.
7. The All-pairs shortest path problem.
8. Proving correctness of DP algorithms.
